

**Project Title:** Project Nova — Adaptive Intelligence for Team Workflows

**Objective:**

To build a system that enhances team coordination and decision-making using intelligent automation.

**Scope:**

The platform should support task management, progress tracking, and some form of AI-driven insight generation. It may involve document handling, user interaction, and integration with existing tools.

**Team Composition:**

A small cross-functional team will be assembled. Roles may include development, design, and AI expertise.

**Timeline:**

The project is expected to span several weeks, with phased development and iterative testing.

**Resources:**

Basic infrastructure will be provided. Access to relevant libraries and datasets may be arranged as needed.

**Risks:**

Potential challenges include integration complexity, unclear user needs, and model performance variability.

**Success Criteria:**

The system should demonstrate improved workflow efficiency and provide meaningful recommendations. Usability and reproducibility will be key.
