

Project Title: Finder 4 — Lost & Found Tracker

Objective:

To create a simple web app that helps students report and recover lost items on campus. Users should be able to post found items, search for missing belongings, and contact each other securely.

Scope:

The platform will include item posting, search functionality, and basic messaging between users. It should be mobile-friendly and easy to use.

Team Composition:

We're a group of three students working on this for our web development class. Roles include frontend, backend, and design. We'll meet weekly to check progress and share updates.

Example Features:

features:

- Lost Item Submission Form
- Searchable Item Listings
- Secure Contact System
- Mobile-Friendly Interface

Example Roles:

roles:

- Frontend Developer
- Backend Developer
- UI/UX Designer
